OT Password Managing
document version 0.1b

Handling hundreds and hundreds of different types of OT equipment, all with their own user-accounts and passwords and of all kind of brands and generations, is something that is so common in the OT world. What can be done you ask?. Many thing can be done about that, budgets permitting of course. but start using a PASSWORD MANAGER NOW! Its free.

Keepass is free, it works great and if used correctly it is pretty secure.

Have a look at:

https://keepass.info/

after installation of the Keepass Password Manager

you need to create your Keepass Database file.

Make sure that You set a Strong password for this.

Something long and complex, but also something that you can remember.

It is recommended to write this password down manually(on A Piece of Paper. And store this under lock and key(in a safe)

once you have the database created.

You simply add your accounts for all kinds of sites and apps.(as entries) into the database.

use the built in password generator to generate very long strong and complex passwords for each account.

You now only have to remember one password!

and also remember to make regular backup of the keepass database file.

Check out the documentation for keepass if you want to know more on how to use it.
